

domain,âĢL commented Benmoussa. âĢLThe A380 enters into service with its nose wheel steering system control loop only tuned with LMS Imagine.Lab AMESim. Tests were performed to confirm the good system performance.âĢLĈFor more information on AMESim and Imagine.Lab Ground Loads software from LMS Ltd., Troy, Mich., call (248) 952-5664, or visit www.lmsintl.com.<|end_of_text|>

December 11th, 2005, 06:30 AMĈHi, I was wondering if any one could point me in the right direction for programming system files. The reason I am interested in this is because I was just wondering when they are called how/what runs them. I know the system runs them but if i make a batch file and name it .sys if i try to run it I would get a message asking me what I want to use to run the file why is that, why doesn't the system try to run it and crash.Ĉ

December 12th, 2005, 09:17 AMĈ"Traditionally" (in DOS and Win 3.x era) MS had actually 3 types (I think) of .SYS files.ĈThe first one is
