

diversity of life on our planet.Č- Christoph Adami tries to define life – by studying artificial life and the characteristics of information processes that seem to behave like life. His self-replicating programs evolve and create virtual ecosystems – and could help figure out how to find extraterrestrial life. [url]Č- **Biologists** thought they had only cataloged about 10% of all fungal species. But there could be a whole different domain of life that is similar to fungus, but isn't. [url]Č- Mantaphasmatodes is the first new insect order discovered since the 1900s. And these insects are almost everywhere. [url]Č- To discover more interesting biological curiosities, check out what's currently floating around the StumbleUpon universe. [url]<|end_of_text|>In a parliamentary democracy the party (or parties if in coalition) which wins the general [national) election forms the government. Its leader becomes the Prime Minister.ČThe Prime Minister selects his/her cabinet choosing his/her most favorable and loyal supporters from parliament. The whole cabinet holds its office during the pleasure of the Prime Minister who can ask any minister to resign or can ask the President to terminate his/her appointment if he/she fails to resign.ČThis is the conventional norms of a parliamentary democracy
