

• However, some small businesses, taking into account of government incentives, engage in the breach. The result: more than half a dozen ideas are actively looking for new drug for ebola. • And these are the days of great help for medication that can treat the virus. Thinking treatments for AIDS and hepatitis C. • Possible treatment for Ebola still many strategies. These include conventional drugs and vaccines, antibodies are suitably designed to not only prevent the spread of diseases in humans, but to be treated in the early stages of infection. • Every idea has shown some promise in animals. But still, nothing surpassed the basic test, so there is nothing ready to deal with in the current outbreak. • Dr. Anthony Fauci, director of the National Institute of Allergy and Infectious Diseases, hope the multi-faceted approach, but he said: "I think it's too early to make a prediction about what to do more or less promising." • One of the challenges is that there are several species and strains of the Ebola virus so different, so that it can not be a one size fits all solution. • But an experimental drug might fit the bill. Called BCX4430. Travis Warren at the Institute for Medical Research, U.S. Army Laboratory for Infectious Diseases in Frederick, Maryland,
